---

Gary,

Fyi. Kent thought there may be a good opportunity here for geophysical methods.

**Subject:** San Jacinto

Hi John,

It was good to see you last week out at Longhorn. Anyhow, I was just thinking about the question you asked me about probing the cover at San Jacinto. I am still thinking that some surface geophysics might be able to determine areas where there are lapses in the liner or cover. I mentioned it to Jon Thomas one of our geophysicists and he even thought you might be able to determine if there was any fluid differences depending on the conductivity of the material.

Anyhow, if you are interested in possibly pursuing the use of geophysics on the cap, please let me know. I can get Jon and others on board to answer your questions.

Take care.
